TERRATRAK PLUS

GROUND PROTECTION FOR EVENTS AND GATHERINGS

TerraTrak Plus is the ultimate single-solution, heavy-duty flooring for protecting natural and synthetic ground before, during and after large-scale events and gatherings. Once it's installed, no other access solutions are required!

COMMON USES OF TERRATRAK PLUS GROUND PROTECTION

TerraTrak Plus allows cars, cranes, forklifts and tractors to move quickly and safely throughout parks, stadiums, event grounds and sports grounds for the crucial load-in and load-out stages of any event.

They have been effectively deployed across most of Ireland's most well-known venues including the Aviva Stadium, Croke Park, the RDS, and Herbert Park.

TUFFTRAK

GROUND PROTECTION FOR INDUSTRY & CONSTRUCTION

TuffTrak is a dual-sided temporary road mat for industrial vehicles, heavy plant, machinery and drilling rigs. Primarily used as a heavy-duty roadway or work pad, this solid composite matting system will support up to 150 tonnes.

COMMON USES OF TUFFTRAK GROUND PROTECTION

Depending on the terrain, the market's leading solid compression moulded TuffTrak mat will sustain up to 150 tonnes. Ground Protection Ireland regularly supplies TuffTrak to our clients in the construction, civil engineering and renewable energy sectors.

ALUMINIUM TRACKWAY PANELS

GROUND PROTECTION FOR EVENTS AND GATHERINGS

Our Aluminium Trackway panels are primarily used to create temporary roads that enable the heaviest industrial vehicles to safely access the most challenging environments. However, due to their dual-purpose design and configuration properties, the panels are equally effective as site compounds, car parks, crane pads, and standing areas.

COMMON USES OF ALUMINIUM TRACKWAY PANELS

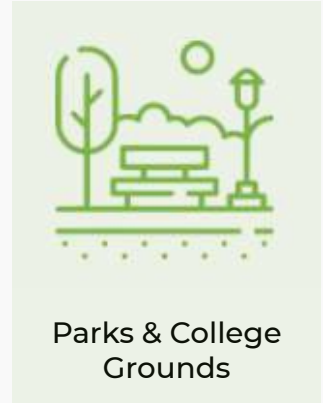

Our Aluminium Trackway Panels are perfect for wet, boggy, and undulating terrain. While they are primarily used to create temporary roads, they are also perfect for compounds, car parks, crane pads and standing areas.

Our specialised installation vehicles are equipped with a mounted hydraulic clamp system that can lay up to one kilometre of trackway in just three days, meaning that we can accommodate tight deadlines if necessary.

GROUND MATS

100% RECYCLED, FLEXIBLE AND DURABLE MATS

The only Ground Protection Ireland product that is available to buy. These 100% recycled Ground Mats are a time-effective temporary access solution for crossing soft, wet and uneven surfaces.

COMMON USES OF GROUND MATS

Ground mats are often used as light and medium-duty temporary roadways, event flooring, overflow car parks, walkways, standing areas and running tracks.

Ground Mats provide a robust support base for people on temporary walkways, cars, commercial vehicles, and small to medium-sized plants to access and traverse soft and uneven terrains. Depending on the site conditions, the mats can sustain up to 80 tonnes but, on softer ground, we recommend loads of no more than 50 tonnes.

GROUND PROTECTION IRELAND

IRELAND'S ONE-STOP-SHOP FOR TEMPORARY ACCESS SOLUTIONS AND SERVICES.

Ground Protection Ireland is an Irish-owned and operated company specialising in temporary access solutions and surface covering systems.

We offer 24/7 delivery and installation of plastic and aluminium ground mats, roads and walkways, designed to protect and preserve even the most vulnerable indoor and outdoor surfaces. From marshlands to dense forests and bogs, our access and bridging systems allow people, heavy-duty vehicles, and machinery to safely navigate even the toughest terrains.

Get in touch with us today at **+353 1 862 3692** or email us at **info@groundprotection.ie** to find out more about our temporary access solutions.
