

# TIPS FOR CHOOSING THE BEST GROUND ACCESS SOLUTIONS

When it comes to selecting the right ground access solutions, careful consideration is essential. Whether you're organising an outdoor event or undertaking a construction project, finding the best solution can revolutionise your ability to work efficiently and ensure a secure environment. Here are some key factors to consider:

## LOAD CAPACITY

Choose ground protection materials that can bear the weight requirements of your project. The material should be robust enough to withstand the anticipated load without compromising safety or causing damage

## DURABILITY

Opt for ground mats that exhibit superior longevity. They should withstand constant foot traffic and environmental elements, ensuring a reliable foundation throughout the project duration

## TERRAIN ADAPTABILITY

Select ground mats with a meticulous design that provides stability and traction, even in challenging terrains characterised by rough surfaces, wet conditions, or soft ground

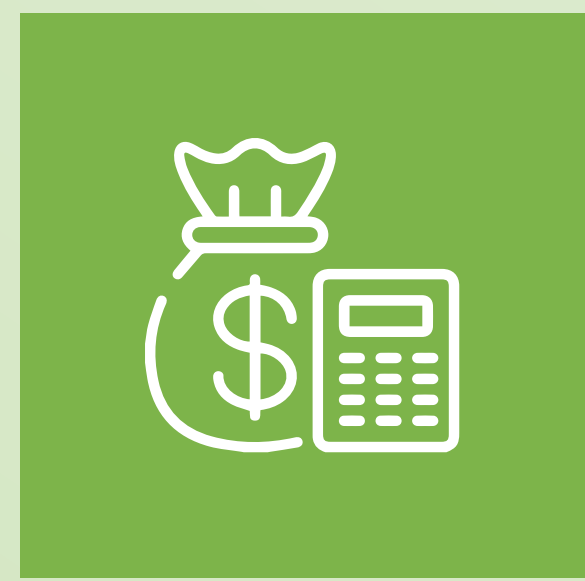

## TERRAIN CONDITIONS

Evaluate the stability of the ground and consider road construction if necessary. Also, prioritise access solutions that protect workers, attendees, equipment, and the environment

## WEIGHT DISTRIBUTION

Recognise the weight of vehicles, equipment, and the number of attendees. Select ground protection products that align with load ratings to prevent damage or compromised safety

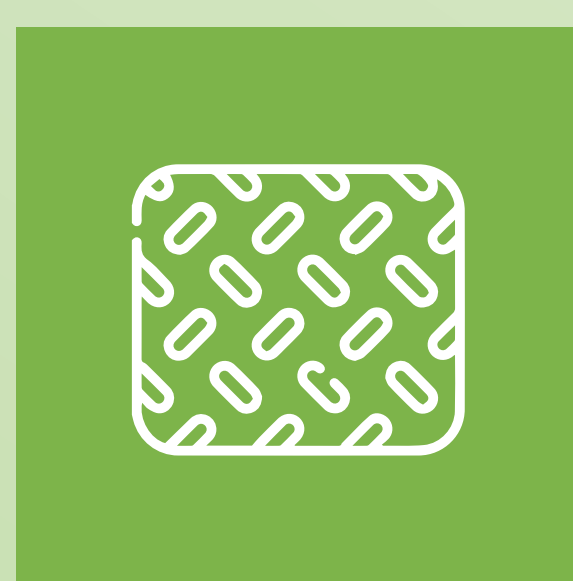

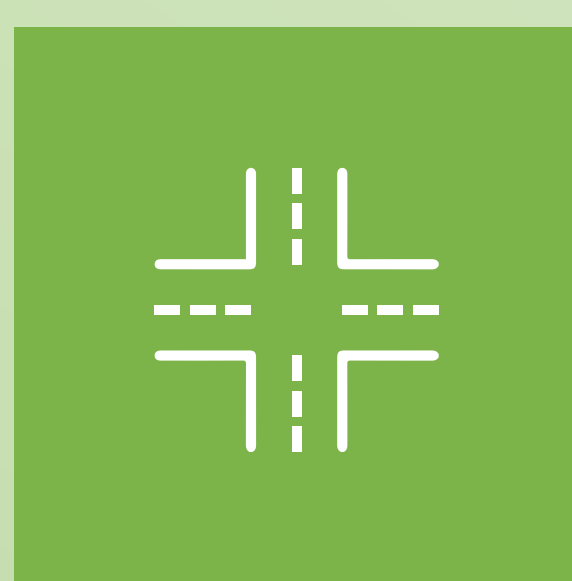

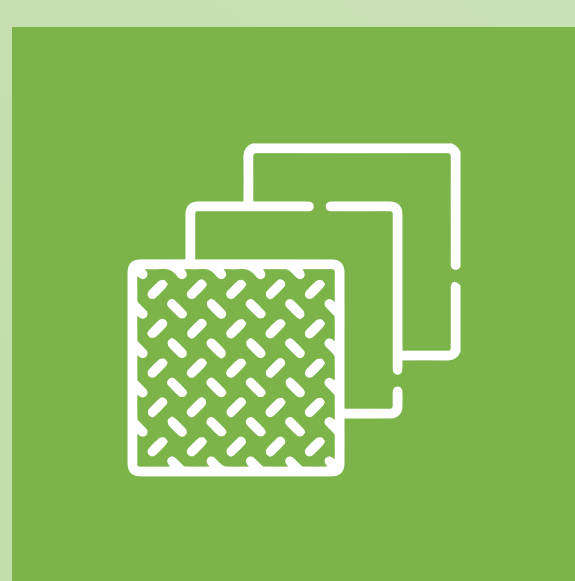

## COST AND BUDGET

Find a balance between cost and quality. Investing in good ground access solutions can lead to cost savings, improved productivity, and expanded business opportunities

## GROUND PROTECTION IRELAND OFFERS COMPREHENSIVE GROUND ACCESS SOLUTIONS

- **Aluminium Trackway Panels:** Ensure safe access for heavy industrial vehicles in demanding environments
- **Ground Mats:** Facilitate movement for pedestrians and vehicles across soft and uneven terrains with a high load-bearing capacity
- **TuffTrak:** Heavy-duty mats for temporary roadways and work pads in soft and wet ground conditions
- **TerraTrak Plus:** Protect natural and synthetic ground surfaces during large-scale events with slip-resistant properties and a seamless walkway
